Not a screen shot, but a recording of motion?

Hi there all!

Good thing this forum is still open for discussion, since questions keep popping up although the course is ended. And I feel more at ease to ask around here, than on Stack Overflow or somewhere else, thanks classmates for that!

The thing is, I want to record a moving object on my android device, but so far I know only of the use of the screen shot. Is it possible to record for instance the bouncing penguin of professor Angrave?

Suggestions are more than welcome! Thanks, Fleur

Read this post:
http://stackoverflow.com/questions/5382212/capture-video-of-androids-screen

Basically, you have two choices:
1/ record from he emulator
http://developer.android.com/tools/help/adb.html#screenrecord
2/ use a video screen recorder
http://www.dvdvideosoft.com/products/dvd/Free-Screen-Video-Recorder.htm#.Uwiez-NdVGY

For rooted device the following app may do the trick:
https://play.google.com/store/apps/details?id=com.iwobanas.screenrecorder.free&hl=en
